I am curious... I have a scanner and a 430-450 mhz ham. Has anyone ever
used two right angle bnc connectors together? I want the antenna to go
down the side to reduce size and increase portability (keep inside
pocket)... if this aint good, is there any other suggestion?

>Does anyone have anything *bad* to say about this beastie?

A military contractor I used to work for needed an automatic antenna tuner for some (relatively) older Collins HF radios. They originally were going to buy some mil-std tuners for \$20k a whack, but instead they were steered to SGC. At \$600 apiece, they are HAPPY CAMPERS! Saved you some tax money even!
